

1. Added Update endpoint

POST /update/

Parameters:

Name	Type	Mandatory	Description
id	Integer	Yes ▾	
name	String	No ▾	
age	Integer	No ▾	
gender	String	No ▾	male/female
email	String	No ▾	
city	String	No ▾	
interests	String	No ▾	["interests"]

2. Added Delete endpoint

GET /delete/{ID}

3. Added match endpoint

GET /match/{ID}

Used score based approach to sort the users and return the matches in the order of scores.

1. 100 points if opposite genders are matched
2. 10 points if same city
3. 1 point for each match found in interests
